Project Sprint #1

The Solitaire game is described in CS449HomeworkOverview. You should read the description very carefully.

In this assignment, you aim to specify the requirements (i.e., user stories and acceptance criteria) of the target software that allows a human player to play a Solitaire game. These requirements will be fully implemented by the end of sprint 3. The minimum features include **choosing the board size and type, starting a new game**, **making a move, determining if a game is over**. The following is a sample GUI layout.

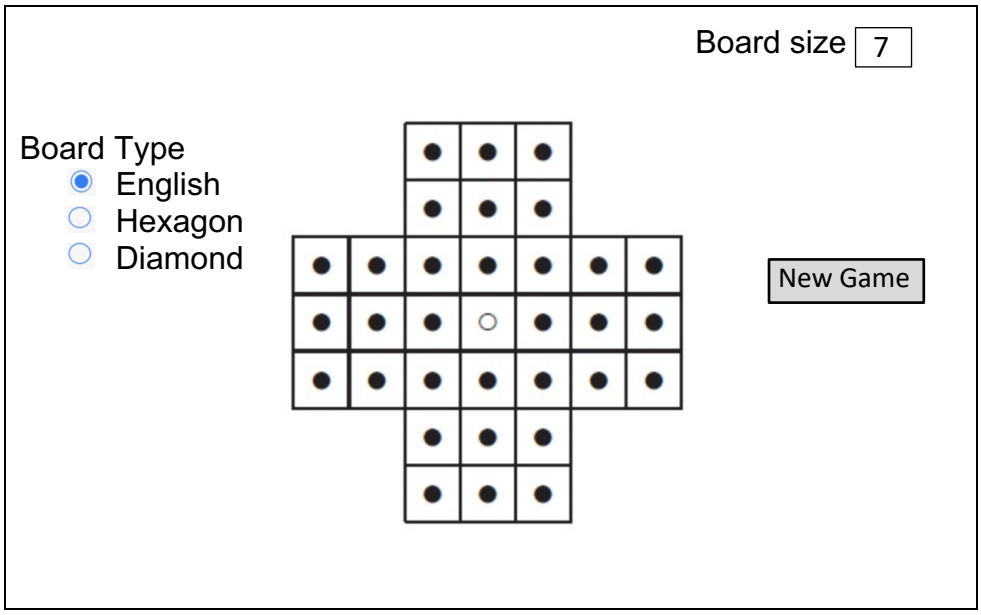

Figure 1. Sample GUI layout of the first working program by the end of Sprint 3

Use the following tables to document your user stories and acceptance criteria.

You are required to use the free ChatGPT or another LLM to complete two user stories and two of their respective acceptance criteria. You must ensure that the generated user stories are correct and fix them if not. At the end of the submission, provide screenshots of your LLM prompts and answers, along with the description of errors the LLM made that you had to correct. Points will be deducted if no screenshots/description are provided.

For the other user stories and acceptance criteria, you are not required to use LLM.

I. User Stories (3 points)

- **User Story Template**: As a <role>, I want <goal> [so that <benefit>]

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
1	Choose a board size	As a player, I want to choose the board size so that I can customize the game's difficulty and length to my preference.	High	3 Hours
2	Choose the board type	As a player, I want to choose the board type so that I can customize the game experience based on my preference.	High	3 Hours

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
3	Start a new game of the chosen board size and type	As a player, I want to start a new game using my chosen board size and board type so that I can play the game with my selected settings.	High	4 Hours
4	Make a move in a game	As a player, I want to make a move during the game so that I can progress through the game and work toward winning.	High	5 Hours
5	A game is over	As a player, I want to be notified when the game is over so that I know the final result and can choose what to do next.	High	4 Hours

II. Acceptance Criteria (AC) (12 points): Add/delete rows as needed.

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inPprogress)
1. Choose a board size	1.1	AC 1.1 <scenario description> Given the player is on the game setup screen, when the board size options are displayed, then the player should be able to see all available board sizes.	Not Started
	1.2	AC 1.2 <scenario description> Given the available board sizes are displayed, when the player selects a board size, then the selected board size should be clearly indicated.	Not Started
	1.3	AC 1.3 <scenario description> Given the player has selected a board size, when the player starts the game, then the game should generate a board using the selected size.	Not Started
	1.4	AC 1.4 <scenario description> Given the player has not selected a board size, when the player attempts to start the game, then the system should either use the default board size or prompt the player to select a size.	Not Started
	1.5	AC 1.5 <scenario description> Given the game has started, when the board is displayed, then the number of rows and columns should match the board size selected by the player.	Not Started
2. Choose the board type	2.1	AC 2.1 <scenario description> Given the player is on the game setup screen, when the board type options are displayed, then the player should be able to see all available board types.	
	2.2	AC 2.2 <scenario description> Given the available board types are displayed, when the player selects a board type, then the selected board type should be clearly indicated.	Not Started
	2.3	AC 2.3 <scenario description> Given the player has selected a board type, when the player starts the game, then the game should generate the board using the selected board type.	Not Started
	2.4	AC 2.4 <scenario description> Given the player has not selected a board type, when the player attempts to start the game, then the system should either use the default board type or prompt the player to select one.	Not Started
	2.5	AC 2.5 <scenario description> Given the game has started, when the board is displayed, then the board should correctly match the type selected by the player.	Not Started
3. Start a new game of the chosen board size and type	3.1	AC 3.1 <scenario description> Given the player has selected a board size and board type, when the player selects the option to start a new game, then a new game should begin.	Not Started
	3.2	AC 3.2 <scenario description>	Not Started

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inPprogress)
		Given the player has selected a board size, when the new game starts, then the generated board should match the selected board size.	
	3.3	AC 3.3 <scenario description> Given the player has selected a board type, when the new game starts, then the generated board should match the selected board type.	Not Started
	3.4	AC 3.4 <scenario description> Given the player has selected both a board size and board type, when the game board is generated, then both selections should be applied correctly to the new game.	Not Started
	3.5	AC 3.5 <scenario description> Given a new game has successfully started, when the board is displayed, then the board should be initialized and ready for the player to make their first move.	Not Started
4. Make a move in a game	4.1	AC 4.1 <scenario description> Given a game is currently active and it is the player's turn, when the player selects a valid move, then the move should be accepted and applied to the board.	Not Started
	4.2	AC 4.2 <scenario description> Given a game is currently active, when the player attempts to make an invalid move, then the move should not be applied and the player should be informed that the move is invalid.	Not Started
	4.3	AC 4.3 <scenario description> Given the player makes a valid move, when the move is completed, then the board should update to display the result of the move.	Not Started
	4.4	AC 4.4 <scenario description> Given the player has completed a valid move, when the board has been updated, then the game should proceed to the next turn.	Not Started
	4.5	AC 4.5 <scenario description> Given the player makes a move that meets a winning condition, when the move is completed, then the game should recognize that the game has been won and display the result.	Not Started
5. A game is over	5.1	AC 5.1 <scenario description> Given a game is currently active, when a player meets the winning condition, then the game should recognize that the game is over.	Not Started
	5.2	AC 5.2 <scenario description> Given the winning condition has been met, when the game ends, then the winning player should be identified and the result should be displayed.	Not Started
	5.3	AC 5.3 <scenario description> Given the game reaches a condition where no player wins, when the game ends, then the game should recognize and display the result as a draw.	Not Started
	5.4	AC 5.4 <scenario description> Given the game is over, when a player attempts to make another move, then the game should prevent any additional moves.	Not Started
	5.5	AC 5.5 <scenario description>Given the game is over, when the final result is displayed, then the player should have the option to start a new game.	Not Started

write a user story for, Choose a board size. thining about the priority and the estimated effort this story will take in housr. Use this template when creating the user story: As a <role>, I want <goal> [so that <benefit>]

For a board game or game application, I'd write it like this:

User Story:

> As a **player**, I want to **choose the board size** so that **I can customize the game's difficulty and length to my preference**.

Priority: High
Estimated Effort: 3 hours

The 3-hour estimate assumes you need to add a board-size selection to the UI, pass the selected size into the game logic, generate the correct board, and do basic testing.

write the acceptance criteria as needed for this user story. make sure to include Acceptance criteria ID, description of the acceptance criteria answering given when and then , and status

Here are acceptance criteria you can use for the **"Choose a Board Size"** user story:

Acceptance Criteria ID	Description	Status
AC-01	**Given** the player is on the game setup screen, **when** the board size options are displayed, **then** the player should be able to see all available board sizes.	Not Started
AC-02	**Given** the available board sizes are displayed, **when** the player selects a board size, **then** the selected board size should be clearly indicated.	Not Started
AC-03	**Given** the player has selected a board size, **when** the player starts the game, **then** the game should generate a board using the selected size.	Not Started
AC-04	**Given** the player has not selected a board size, **when** the player attempts to start the game, **then** the system should either use the default board size or prompt the player to select a size.	Not Started
AC-05	**Given** the game has started, **when** the board is displayed, **then** the number of rows and columns should match the board size selected by the player.	Not Started

Do the exact same with this story: Choose the board type

User Story: Choose the Board Type

User Story:

> As a **player**, I want to **choose the board type** so that **I can customize the game experience based on my preference**.

Priority: High
Estimated Effort: 3 hours

Acceptance Criteria

Acceptance Criteria ID	Description	Status
AC-01	**Given** the player is on the game setup screen, **when** the board type options are displayed, **then** the player should be able to see all available board types.	Not Started
AC-02	**Given** the available board types are displayed, **when** the player selects a board type, **then** the selected board type should be clearly indicated.	Not Started
AC-03	**Given** the player has selected a board type, **when** the player starts the game, **then** the game should generate the board using the selected board type.	Not Started
AC-04	**Given** the player has not selected a board type, **when** the player attempts to start the game, **then** the system should either use the default board type or prompt the player to select one.	Not Started
AC-05	**Given** the game has started, **when** the board is displayed, **then** the board should correctly match the type selected by the player.	Not Started
